

CrystalView 60

CrystalView 60 is a custom engineered glass rear projection screen, designed to provide excellent image fidelity and contrast in environments where ambient light is unavoidable

CrystalView 60

CrystalView 60 is a rear projection screen designed to excel in environments where ambient light is difficult to control. The screen has a deep neutral gray tone when not in use, which is attractive and adds a note of quality in the venue. The surface hue is engineered to assist in preserving contrast in projected images.

CrystalView 60 offers a non-glare finish toward the viewer via an advanced optical coating on an engineered tinted glass substrate.

The glass substrate offers excellent dimensional integrity compared to acrylic rear projection screens.

CrystalView 60 has a nominal gain performance factor of 0.6 and furnishes a 55 degree half gain value which accommodates wide seating arrangements. The screen also works beautifully with short throw projectors.

Though not exclusively optimized for edge blend displays, this product can be used in that capacity within some design constraints and in conjunction with longer focal length projection light paths.

CrystalView can be produced in ¼" thickness up to 120 inches in overall width. Larger screens are fabricated as laminated Class II Safety Glass and are available in ½" thickness, in sizes up to 110" X 204".

FEATURES

- Dark gray tint for added contrast
- Highly desirable for spaces with uncontrolled ambient light
- Matte surface, virtually eliminates glare
- Extra-wide viewing angle
- Excellent white field uniformity with short focal length projectors

SPECIFICATIONS

- Material Type: glass with optional safety glass
- Gain: 0.6
- Half Gain: 55 degrees
- Minimum Throw Distance: 0.8 x image distance
- Ambient Light Front Reflectance Value: 10% per foot-candle
- Ambient Light Resistance: superior performance in environments with ambient light
- Lay Flat Quality: excellent
- Flame Resistance: yes
- Size Limitations: 9'2" x 17'0"
