

FireHawk SST

FireHawk SST is a flexible front projection screen material formulated to dramatically increase black levels, shadow detailing, & color saturation. Sony Electronics approached Stewart to collaborate in the design of this specialized material to optimize the performance of the Sony projectors.

FEATURES

- Superior performance in environments where ambient light cannot be controlled
- Engineered for use with 1080p projection technology
- Extremely smooth and flat surface for better focusing capabilities
- Superb black levels, shadow detailing, and color saturation

Material Type	Flexible Front Screen
Gain	1.1
Half Gain	32 degrees
Minimum Throw Distance	1.4 x image width
Ambient Light Front Reflectance Value	29% per foot candle
Ambient Light Resistance	Excellent performance in ambient light
Lay Flat Quality	Excellent
Flame Resistance	Yes
Optional Sound Perforations	Microperf X2 (optional)
Size Limitations	8' x 90' - Seamless
Screen Models	Fixed, retractable, variable masking
